7. Ans :

- a) Session : Session is a period of start and end time in web browser. In PHP we are used \$\_SESSION for session variable.
- b) AJAX : AJAX is a method to do an XMLHttpRequest from a web page to the server and send/retrieve data to be used on the web page.
- c) SQL injection : SQL injection is the placement of malicious code in SQL statements, via web page input.
- d) Dynamic Website : A dynamic website generates the content and displays it based on what actions the users make on the page.

8 Ans :

```
<?php
$array = [
    ['Joe', 'joe@hmail.com', 24],
    ['Doe', 'doe@hmail.com', 25],
    ['Dane', 'dane@hmail.com', 20]
];

?>
<table border="1">
<tr>
    <th>first_name</th>
    <th>last_name</th>
    <th>age</th>
</tr>

<?php foreach ($array as $var): ?>
<tr>
    <td><?php echo $var[0] ?></td>
    <td><?php echo $var[1] ?></td>
    <td><?php echo $var[2] ?></td>
</tr>
<?php endforeach; ?>

</table>
```
